Objectives

By the end of the session, you will be able to –

- create an EndNote library and add references to your EndNote library
- export your references into your MS Word document (CWYW)
- generate a bibliography.
What is EndNote?

EndNote is a leading reference management software.
What does EndNote do?

EndNote puts your references and citations into any format for your CV, paper, manuscript, book, grant application etc.
What does EndNote do? Each time you cite a new reference, it will be added to your reference list (in the right place).
What does EndNote do?

• Provides data storage for information management
• Keep all your references in a central location
• Works with MS Word
What does EndNote do?

• Provides over 6000 citation styles
• Allows for consistency with automatic formatting
• Allows you to cite your work correctly, helping to avoid plagiarism
How do we use EndNote?
Create an EndNote Library

- Open the EndNote programme
- Select the File > New option
Create an EndNote Library

• Name the library.

• Select a folder.

• Save your new EndNote library in the folder you have selected.
Export references from databases to EndNote

• Open the relevant EndNote library.

• Search the database from which you would like to export references.

• Select the references and click Export or Save Citations (Different databases use different terminology).
Export references from databases to EndNote

• Choose the EndNote or RIS option and open the file.

• The references will then be displayed in your EndNote library.
Exporting References From PubMed to EndNote

1. Select the references you want to export.
2. Click on the 'Send to' button.
3. Choose 'Citation manager' to select the citation manager you want to use.
4. Click 'Create File' to generate a file for use with external citation management software.
5. Download 3 citations.
Exporting References From PubMed to EndNote

• Open the target EndNote library.
• Open the PubMed citation files.
• The references will then populate your EndNote library.
Combined treatment of xenon and hypothermia in newborn rats--additive or synergistic effect?
Brandon Wang, BA* Elizabeth Kubota, DO* Adrian Bayona, MD*

*Department of Pediatrics, University of Texas McGovern Medical School, Houston, TX

AUTHOR DISCLOSURE

Mr Wang and Drs Kubota and Bayona have disclosed no financial relationships relevant to this article. This commentary does not contain a discussion of an unapproved/investigative use of a commercial product/device.

Presentation

A newborn infant girl born small for gestational age (SGA) at 39 weeks via spontaneous vaginal delivery to a 17-year-old gravida 1 para 1 woman from El Salvador who has no significant medical history presents with a unilateral right eye opacity. The mother’s pregnancy was complicated by hyperemesis in the first trimester, urinary tract infection during the second trimester, and poor weight gain (only 1.8 kg). The mother reports no sexually transmitted infections or other previous infections. The mother does report a history of marijuana use before this pregnancy but no other drug, tobacco, or alcohol use. The mother also has no history of recent travel or contact with anyone who has traveled outside the United States. No structural or anatomical abnormalities were detected on prenatal ultrasonography at 11, 18, 21, 34, and 37 weeks’ gestation.

The baby had Apgar scores of 8 at 1 minute and 9 at 5 minutes, normal resuscitation, and maternal laboratory screenings that were negative for infections. The patient is noted to have a right corneal opacity and small growth parameters based on the World Health Organization growth standards for girls aged 0 to 2 years (microcephaly with fronto-occipital circumference at the sixth percentile and SGA with length at the 36th percentile and weight at the 20th percentile).
Manually Adding References to EndNote
Manually Adding References to EndNote
Cite While You Write

• To insert in-text citations and their full bibliographic entry – Click on the EndNote tab in MS Word.

• Select “Insert Citation” and place the cursor beside the information that you would like to cite.
Cite While You Write

In the dialogue box that appears, enter a keyword, e.g. the author’s name, and click “Find” to highlight the relevant citation.

Click “Insert” to enter the in-text citation and full bibliographic entry in your paper.
Cite While You Write

“The reason for such a high interest in these microorganisms is, of course, the fact that species of the genera *Rickettsia* and *Orientia* are well-known etiologic agents of human and vertebrate diseases, having blood-feeding arthropods as vectors.” (Vannini et al., 2014)

You can change the citation style used, even after references have been added to the paper.
Tractography provides a reliable method for early assessment of perinatal brain injury (1)

Importing PDFs as References
Importing PDFs as References
Generating a Bibliography From an EndNote Library

Select the references from which to generate the bibliography.
• Click on the “Export” icon.

• Select “RTF” and your choice of citation style from the new dialogue box and save in your folder of choice.

• Name your bibliography and save it.
